Profile

Software developer and second-year Computer Science student at the University of Eastern Finland. I design and build full-stack web platforms, Android and iOS apps, Shopify apps and themes, and custom websites from scratch, and I take problems from first observation to a launched product. Rannikon, built for a Finnish berry farm, now runs a whole season for 300+ workers in five languages.

Role Software Developer	**Focus** Web platforms, mobile apps, Shopify	**Location** Helsinki, Finland
Education BSc Computer Science (2nd year), University of Eastern Finland	**Also** Student Ambassador, University of Eastern Finland	**Core stack** TypeScript · React · Next.js · Node.js · Fastify · PostgreSQL
Working style Spots a problem, builds the fix, presents it	**Languages** English (native), Finnish (learning)	**Availability** Full-time, part-time, internship or freelance, remote or on-site.
Work authorisation Has a work permit for Finland.		

Experience

Apr – Jul 2026
Onshipy

Founder & Full-Stack Developer

Dropshipping automation for resellers: import a product from any website, price it, and push it to a Shopify store, with fulfilment handled automatically.

- Built the product importer: a scraper on axios and Cheerio with a dedicated Nike parser, automatic currency detection and EU price normalisation.
- Designed pricing and listing tools: manual or margin-based pricing, a live profit calculator, and filterable listing tables.
- Implemented one-click Shopify OAuth, push-to-store for single or all listings, and a webhook endpoint for custom storefronts.
- Built a browse experience over 900+ brands in 48 categories with trending indicators and a live activity feed.
- Added subscription billing with Stripe across Free, Pro and Enterprise plans.

Next.js · React · Fastify · PostgreSQL · Stripe · Cheerio · Shopify Polaris · Render

May 2026
Swifrly

Founder & Full-Stack Developer

A crypto financial ecosystem that connects digital assets to real-world payments: trading, conversion, payments and card spending in one app.

- Designed and built the platform around eight product pillars, including multi-currency wallets, trading with live charts, invoicing, payroll and merchant tools.
- Built crypto invoicing with shareable payment links, and scheduled payroll to wallet addresses in any supported currency.
- Integrated live market data from CoinGecko and TradingView charts.
- Wrote a Solidity payroll smart contract and integrated it with Ethers.js.

Next.js · React · Fastify · PostgreSQL · Supabase · Knex.js · Solidity · Ethers.js

Jun – Sep 2026
Rannikon Puutarha

Freelance Full-Stack Developer

Designed, built and launched a workforce management platform for a berry farm in Halikko, Finland, replacing paper payroll forms, notebooks and handwritten logs.

- Replaced four paper payroll forms with one system used by 300+ seasonal workers across 6 house groups, in 5 languages.
- Built an hour-calculation engine on the backend so every device shows the same result, eliminating manual calculation errors.
- Delivered six role-based experiences (worker, supervisor, housemaster, payroll, admin and more) with PDF and Excel exports and email invitations.
- Cut payroll verification from days to minutes with a check that compares supervisor-recorded and worker-submitted hours.
- Shipped a web app, an Android app on Google Play and a real-time display for the house televisions.

- Proposed the project directly to the farm manager, who approved and endorsed it and introduced me to other companies.

Next.js · React · Fastify · PostgreSQL · Supabase · React Native · Expo · Resend · Render

May 2026

Knewler

Full-Stack Developer

A multi-tenant eLearning platform where universities, companies and sports clubs launch a branded, fully isolated training environment in minutes.

- Built multi-tenant onboarding with an isolated environment and JWT-scoped sessions per institution.
- Implemented courses, a student registry, timetable scheduling with recurrence, and auto-issued certificates with unique verification codes.
- Built a timed exam engine with a question bank (multiple choice, essay, true/false, file upload), shuffling and tab-lock anti-cheat.
- Added custom domain support so each tenant can point its own domain at its environment.

Next.js · React · Fastify · PostgreSQL · Supabase · Resend · Render

May – Sep 2026

Blanc

Shopify Theme Developer

Blanc is a custom Shopify Online Store 2.0 theme for fashion and label-style stores, built from the ground up in Liquid.

- Created brand-specific page types beyond standard commerce templates: New, Combos, Collabs and Archive.
- Implemented faceted filtering, unit pricing, cart discounts, accelerated checkout with Shop Pay Installments, and a gift card recipient form with scheduled sending.
- Added a search overlay with suggested products and related and complementary recommendations via Shopify's Product Recommendations API.
- Made colours, fonts and the header and footer merchant-configurable in the theme editor, with no build step.

May 2026

Onshipy Shopify App

Shopify App Developer

An embedded Shopify app that connects a merchant's store to the Onshipy platform.

- Built the embedded admin interface with Shopify Polaris and App Bridge: dashboard, products, listings, orders, customers, analytics and settings.
- Wrote the Node.js backend on Shopify's official API library, handling the OAuth install flow.

Sep 2026

Kuopas

Full-Stack & Mobile Developer

A student housing app for Kuopas in Kuopio, as a web app and a mobile app, in Finnish and English.

- Built building chat, a noticeboard with reactions and comments, complaints, laundry, sauna and parking booking, and staff tools.
- Ported the app to Expo and React Native through a mobile API bridge on the web app's backend, so both share the same data and rules.

Next.js · TypeScript · Prisma · PostgreSQL · React Native · Expo · Tailwind CSS

Sep 2026

Tekman

Full-Stack & Mobile Developer

A resident app for university and apartment housing communities, as a web app and a mobile app.

- Built news and announcements, building and community chat, a noticeboard, complaints, booking for laundry, sauna and parking, bill splitting, roommate matching, a marketplace and lease management.
- Ported the app to Expo and React Native, porting the same features, rules and copy as the web app.

Next.js · TypeScript · Prisma · PostgreSQL · React Native · Expo · Tailwind CSS

Oct 2026

ChronKeep

Full-Stack & Mobile Developer

A calendar and to-do list that keeps reminding you until the assignment is done, as a web app and a mobile app.

- Built one calendar for lessons, events and assignments, a quick add that reads a typed sentence into a task, and reminders that keep nagging every few minutes until ticked off.
- Built the Expo and React Native app with reminders scheduled on the phone so they arrive with no signal, syncing to the web app's account within about a minute.

JavaScript · Node.js · PostgreSQL · Supabase · Render · React Native · Expo · TypeScript

Sep – Oct 2026

Pursecast

Full-Stack & Mobile Developer

A personal finance app, as a web app and a mobile app.

- Built spending, bills and income, budgets, owed money, and a day-by-day "Money Weather" forecast of what's coming.
- Built the Expo and React Native app, porting the web app's screens, copy and business logic 1:1 to a native experience.

Next.js · TypeScript · Prisma · PostgreSQL · React Native · Expo

Sep – Oct 2026

Slotnook

Full-Stack Developer

White-label booking for student housing organizations.

- Built laundry, sauna, parking and shared-space booking for multiple organizations from one deployment, each with its own branding and texts.
- Built multi-tenant routing so each organization is reached through its own subdomain or a connected custom domain.

Next.js · TypeScript · Prisma · PostgreSQL

Oct 2026

Notchlight

macOS Developer

Widgets for the macOS lock screen and a Dynamic Island around the notch, shipped as a paid app.

- Built 21 widgets (weather, calendar, Apple Music's time-synced lyrics, a live globe and more) drawn in a layer above the lock screen itself, plus a Dynamic Island for MacBooks with a notch.
- Built Light, a panel that opens from the notch with music, a mirror, calendar, notes, timers and to-dos side by side, and shipped the product with its own website and pricing.

Swift

University of Eastern Finland

Student Ambassador

Department of Computer Science, Faculty of Natural Sciences, Forestry and Technology.

Education

Bachelor's degree, Computer Science

University of Eastern Finland
